## **DETAILED ACTION**

Page 2

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

1. Claims 1-19, drawn to an ink-jet head and a filter assembly used for an ink-jet head, classified in class 347, subclasses 65 and 85.

II. Claims 20-28, drawn to a method for manufacturing an ink-jet head, classified in class 29, subclass 29/890.1 (as approved by Dexter Tugang in A.U. 3729).

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the ink jet head and filter assembly do not necessarily need to be manufactured using the claimed method of manufacturing. It is well know to one of ordinary skill in the art that there are a variety of means to manufacture an ink-jet head.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Within group I, the following further restriction requirement is needed:

- A. Claims 1-9, drawn to an ink jet head, classified in class 347, subclass 65.
- B. Claims 10-19, drawn to a filter assembly used for an ink-jet head, classified in class 347, subclass 85.

Art Unit: 2853

Inventions A and B are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the ink jet head does not necessarily need to use the filter disclosed in invention B. It is well know that an ink jet head can use a number of different filters. The subcombination has separate utility such as filtering ink in a number of different ink heads, not just the one claimed in invention A.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leonard S. Liang whose telephone number is (571) 272-2148. The examiner can normally be reached on 8:30-5 Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
